PROJECTS

OurSpace (Rails, React, Redux HTML5, AWS and CSS3)

[Live Site](#) | [Github](#)

A solo-fullstack, single-page Facebook clone where users can make posts, add comments, likes, and send and receive friend requests.

- Single-handedly implemented custom backend and front end user authentication by combining Rails conventions, Active Record, and customized React-Router higher order components.
- Implemented PostgreSQL relational database to create relational data modeling and polymorphic associations.
- Coalesced best practices into routine including: bootstrapping the current user to frontend, implementing protected routes, protecting against CSRF injection attacks, coding DRY, and using CRUD methods.
- Optimized database usage and eliminated N+1 queries by observing SQL and Active Record best practices.
- Connected the Rails back end to AWS S3 for media storage and organization while maintaining content security with AWS IAM.
- Incorporated React-Redux container and Redux selector patterns to architect highly scalable and uni-directional front-end state management.
- Unionized Webpack and Babel to ensure a reliable uniform user experience across web browsers.

BlockUp (Javascript, MongoDB, Mongoose, Express, React, Node.js, Axios, HTML, and CSS)

[Live Site](#) | [Github](#)

A four-person team fullstack strong security text, video, and audio messaging application built to block out scammers and bots.

- Managed a team of four Software Engineers as the teamlead, organized and implemented daily Git workflow, reducing merge conflicts to zero, and delegated tasks to each member improving efficiency by 50%.
- Structured highly secure user authentication by incorporating two-factor authentication API; Google Authenticator.
- Integrated Socket.io to enable realtime, bi-directional communication between web clients and servers.
- Leveraged asynchronous code to reduce time complexity of backend calls and make user interaction seamless.

ProjectPark (Javascript, Three.js, Cannon.js, Blender, Canvas, HTML, CSS,)(IN-PROGRESS)

[Live Site](#) | [Github](#)

A solo frontend open-world interactive application where users can explore resume-related content of the user in a light-hearted and colorful environment.

- Undertook learning Three.js and implemented best practices for decreasing render time by using Draco to load 3d models.
- Put together a physics engine to automate model cars with steering controls with no prior experience.
- Constructed custom, low-poly, animated, 3D car using Blender and imported functionality into three.js.
